Report Title

Final Report: Spin-Orbit Coupled Bose-Einstein Condensates

ABSTRACT

This ARO research proposal entitled "SPIN-ORBIT COUPLED BOSE-EINSTEIN CONDENSATES" (SOBECs) explored properties of the fundamentally new class of coherent states of quantum matter that had been predicted by the PI and subsequently experimentally realized with cold atoms.

A unique feature of the SOBECs is a topologically protected spin-orbital degeneracy of the ground state that results in a variety of fascinating, previously unseen phenomena, which can be exploited for ultra-sensitive quantum interferometry, gravimetry, and fault-tolerant topological quantum computing. The PI has developed a quantum-mechanical description of the new phases and designed specific experimental schemes to realize them. The PI also generalized the new concepts to interacting spin-1/2 bosons in optical lattices and described a superfluid-to-Mott insulator transition in spin-orbit-coupled systems.

Enter List of papers submitted or published that acknowledge ARO support from the start of the project to the date of this printing. List the papers, including journal references, in the following categories:

(c) Presentations

1. Invited speaker at the conference, "Frontiers of Condensed Matter Physics," organized by the Royal Swedish Academy of Sciences in Stockholm, Sweden (January, 2011). Title: "Quantum Dynamics and Quantum-to-Classical Correspondence"
2. Invited Physics Department Colloquium at the University of Melbourne, Australia; Title of the Colloquium: "Exotic quantum phenomena and topological phases in spin-orbit-coupled systems" (March, 2011)
3. Invited speaker at the international Workshop, "Physics of Cold Trapped Atoms" (LPHYS'11) Sarajevo, Bosnia and Herzegovina, (July, 2011). Title: "Spin-orbit-coupled Bose-Einstein condensates" (March, 2011)
4. Invited talk at the program on topological insulators held in the Kavli Institute for Theoretical Physics, Santa Barbara, CA (September - December, 2011). Title: "Dual Approach to Nonequilibrium Quantum Mechanics and Topological Dynamical Systems"
5. Co-organizer and speaker at the Workshop and Winter school, "New Spin 2," held in Texas A & M University in January, 2012. Title of the talks: "Introduction to the theory of spin-orbit-coupled systems in solids and cold-atoms," (school) and "Theory of Spin-Orbit-Coupled Cold-Atom Systems" (Workshop)
6. Invited talk at the statistical physics seminar at the Institute for Physical Science and Technology, College Park, MD (January, 2012). Title: "Dual Approach to Time-Dependent Quantum Mechanics and Topological Dynamical Systems"
7. Invited talk at the Workshop "Frontiers of quantum condensed matter physics: light, matter and unusual devices out of equilibrium," New York, NY (March, 2012). Title: "Dual Approach to Time-Dependent Quantum Mechanics and Topological Dynamical Systems"
8. Invited talk at the Symposium "Frontiers of Quantum Matter" at the Center for Quantum Science, George Mason University, Fairfax, VA (June, 2012); Title: "Floquet topological insulators"
9. Invited talk at the International Conference, "Dubna -Nano 2012," at the Joint Institute for Nuclear Research, Bogoliubov Laboratory for Theoretical Physics, Dubna, Russia (July, 2012) Title: "Floquet topological insulating states"
10. Invited talk at the 21th International Laser Physics Workshop, University of Calgary, Calgary, Canada (July, 2012). Title: "Floquet topological insulators"
11. Invited talk at the KITP conference, "Dynamics and Thermodynamics in Isolated Quantum Systems," Kavli Institute for Theoretical Physics, Santa Barbara, CA (August, 2012). Title: "Stimulation of Quantum Phases by Time-dependent Perturbations"
12. Invited condensed matter seminar at Penn State University, (September, 2012). Title: "Quantum fluctuation phenomena in low-dimensional superfluids"
13. Invited Departmental Colloquium at the University of Minnesota, Minneapolis, MN (September, 2012). Title: "Exotic Quantum Phenomena and Topological Phases in Spin-Orbit-Coupled Systems"
14. Invited condensed matter seminar, William I. Fine Theoretical Physics Institute, University of Minnesota, Minneapolis (September, 2012). Title: "Stimulation of Quantum Phases by Time-dependent Perturbations"
15. Invited CUA seminar at the Harvard-MIT Center for Ultracold Atoms (CUA), Cambridge, MA (October, 2012). Title: "Stimulation of Quantum Phases by Time-dependent Perturbations"
16. Invited physics Colloquium at PennState University, University Park, PA (December, 2012), Title: "Exotic Quantum Phenomena and Topological Phases in Spin-Orbit-Coupled Systems"
17. Invited physics Colloquium at Monash University, Melbourne, VIC, Australia (January, 2013), Title: "Exotic Quantum Phenomena and Topological Phases in Spin-Orbit-Coupled Systems"
18. Invited seminar at the University of Massachusetts, Amherst, MA (April, 2013), Title: "Spin-orbit coupling in cold atoms"

19. "Quantum Floquet Dynamics of the Order Parameter in Fluctuating Superconductors," Aspen Center for Physics, Aspen, CO (June, 2013)

20. "Exotic quantum spin models in spin-orbit-coupled Mott insulators," Invited talk at the 23rd International Laser Physics Workshop, Prague, Czech Republic (July, 2013)

21. "Many-body physics of spin-orbit-coupled quantum gases," Invited talk at the March Meeting 2014 in Denver, Colorado (March, 2014)

22. "Synthetic spin-orbit coupling in cold atom systems," invited seminar at the Institute of Theoretical Physics and Astronomy, Vilnius University, Vilnius, Lithuania (July, 2014)

23. "Moving solitons in fermionic superfluids," presentation at the Workshop "Gauge Fields in Condensed Matter, Ultracold Atoms and Beyond," Aspen Center for Physics, Aspen, CO (August, 2014)

24. "Moving solitons in fermionic superfluids," keynote talk at the Australasian Workshop on Emergent Quantum Matter 2014, Dunwich, Queensland, Australia (November, 2014)

Sub Contractors (DD882)

Inventions (DD882)

Scientific Progress

1. A theory of vortex excitations in spin-orbit-coupled condensates developed.
2. A new kind of non-equilibrium topological insulating states introduced, with possible realization in driven optical lattices.
3. Experimental schemes to realize various synthetic spin-orbit-coupled Hamiltonians designed.
4. A new kind of spin-orbit-coupled Mott insulators introduced.
5. Theory of unconventional Cooper pairing in spin-orbit-coupled Fermi gases developed.
6. Realistic models that host quantum spin liquid states proposed
7. A theory of superfluid-to-topological insulator developed with applications to optical lattices.
8. Generalized inverse scattering methods to describe soliton motion in quantum superfluids.
